Education

Norfolk State University — **Norfolk, VA**
Accelerated Master of Science in Computer Science — **May 2027**

Norfolk State University — **Norfolk, VA**
Dozortez National Institute for Mathematics and Applied Sciences — **May 2026**

- B.S. Computer Science and Mathematics
- Cumulative GPA: 3.8/4.0

Skills

Languages: **Python**, **SQL**, C++, Excel, **R**
Libraries: Selenium, **Pandas**, **NumPy**, Seaborn, Matplotlib
Development: Visual Studio Code, Git, GitHub, Jira, Bitbucket, **Snowflake**, Docker, **Tableau**, Power BI, Claude
License/Certification: **Active Secret Clearance,** AWS Cloud Practitioner, SCRUM Certification

Work Experience

PepsiCo | Data & AI Intern — May 2026 – Aug 2026

- Engineered a **multimodal RAG-based AI agent** leveraging multiple enterprise data sources to identify new product opportunities, reducing opportunity discovery and transformation time by **33%**.
- Presented and championed an **AI automation strategy** for Data Product Managers, outlining how newly deployed AI capabilities could streamline product management workflows, reduce manual effort, and increase team productivity.

Dominion Energy | Emerging Technology Intern — May 2025 – July 2025

- Developed **semantic models** to support a consumer-facing AI assistant, improving natural language understanding for enhanced user interactions
- Analyzed large-scale consumer behavior datasets to fine-tune a **large language model** (LLM) capable of image classification using **k-shot prompting** techniques

Northrop Grumman | Cyber Technical Intern — May 2024 – July 2024

- Developed and maintained software applications to support classified projects, ensuring compliance with security protocols.
- Documented project progress and technical details, and regularly briefed the team to ensure alignment, transparency, and continuity across development stages

MITRE | Cyberfuture's Intern — June 2023 – August 2023

- Executed and completed code to automate tasks in OpenCTI with the **Selenium WebDriver**
- Implemented program onto the consumer product with tools such as **Jira, Bitbucket,** and **Git**, ensuring seamless integration and version control throughout the entire development.

Project Experience

Research Navigator — Ongoing

- Architected a **multi-agent AI coaching system** that provides personalized guidance, Socratic questioning, and milestonebased feedback while ensuring students retain ownership of their research.
- Built a full-stack application using **Next.js, FastAPI, PostgreSQL, and Docker**, implementing secure APIs, persistent data storage, and scalable backend services.

NBA LLM Agent – Data Science Project — October 2025

- Designing an intelligent NBA assistant agent using LLMs and few-shot prompting to answer historical and player-based questions (e.g., "Who was the scoring leader in 2005?")
- Building a custom dataset pipeline from scratch using 'nba_api', with self-engineered data cleaning, structuring, and storage processes

Wembanyama Data Analysis Project — June 2025

- Leveraged the NBA API to collect and analyze Victor Wembanyama's player statistics and team performance data with Python and Pandas
- Conducted comparative performance analysis of Wembanyama's impact on team metrics across the 2024-2025 season using data visualization tools like **Matplotlib**, **Seaborn**, and **Tableau**
